On Target AI

Beta

Python, AI Back-End Developer

Remote (EU or the UK)

Part-time

On Target AI
Beta

Who are we?

At **On Target AI,** we are building an **AI product** that helps digital marketers generate tailored content by mirroring customers' language. This is done by uploading data such as customers' interview transcripts, customer reviews, survey answers, and other types of data.

Who are we looking for? The Role.

We are seeking a passionate back-end developer with an increased interest in building AI Tech Products. Your skills and traits should balance creativity and nerdiness.

You'll work closely with the Leadership team at On Target AI and a couple more passionate marketers to bring AI products to life.

We are looking for someone proactive, autonomous, curious, and hungry for learning – as you will be doing much of that in this position.

Previous experience & Responsibilities

Must have previous experience with:

- Python, and Django (+5 years)
- Postgress or other SQL databases
- AI APIs
- AWS infrastructure and platforms
- Version control with git

Ideally, a good understanding of/willingness to dig into:

- React, and Next.js, Javascript might come in handy as well
- Kubernetes
- Open AI GPT-4 API
- Claude AI
- Open AI Embeddings
- Langchain
- Vector databases such as Pinecone or Chroma
- Building custom chatbots

Key responsibilities:

- Follow the product brief and design requirements to build and scale the product
- Write clean, readable, and easily maintainable code
- Integrate AI platform APIs into the product
- Experiment with the latest technological advances and understand how they can be leveraged into the product
- Monitor reliability and performance through dashboards and tools to ensure availability
- Address bugs and feature requests

Soft skills

- Highly proactive and autonomous
- A belief in and determination to solve complex problems
- Ability to see the big picture and manage stakeholders
- Comfortable with working in an environment of rapid growth, constant change, and lots of unknowns.
- Willingness to fail forward, learn, and grow

On Target AI
Beta

Benefits

- Being part of a fast forward-thinking team
- Being part of the core team building AI Products
- Fully remote position
- Working with a high number of experts in various fields, all connected to the digital and tech environment
- Transparent and candid communication
- Performance-based bonuses
- Growing in an innovative company that places high value on personal development and professional growth
